#### 3. Into the cluster

- High Performance Computing (HPC): the ability to process data and perform complex calculations at high speeds using the cutting-edge modern technology.
- Supercomputer: the class of machines that rank among the fastest in the world.
  - Rule of thumb: at least 100 times as powerful as a single PC.

600 mph

60 mph

How do we evaluate the performance of supercomputer?

**1. Intro to HPC** 

2. Getting started

3. Into the cluster

• Performance is measured in Floating Point Operations Per Second (FLOPS)

## ENIAC FLOPS: 500

**1. Intro to HPC** 

"The first teraflop desktop PC: Intel i97980XE (Sep 2017)"

CPU clock rate: 4.4 GHz CORE: 18 cores FLOPs per cycle: 16

3. Into the cluster

#### iv. Reset password

## Case study

#### • User:

"I have been trying to access my accounts on QB2 via an SSH client, but the connection won't go through. I reset my passwords this weekend and the terminals keep giving me a 'Password Authentication Failed' error message....."

#### User Services:

"When you send a password reset request, it has to be manually processed for security reason before your new password becomes available."

3. Into the cluster

#### iv. Reset password

## **Password security**

- Passwords should be changed as soon as your account is activated for added security.
- Password must be at least 12 and at most 32 characters long, must contain 3 of the 4 classes of characters
  - Lowercase letters
  - Uppercase letters
  - Digits
  - Special characters (punctuation, spaces, etc.)
- Do not use a word or phrase from a dictionary
- Do not use a word that can be obviously tied to the user (*e.g.*, your name, user name, *etc.*)
- Do NOT share your password to others, including your advisor!!!!!

**NI** 

**1. Intro to HPC** 

2. Getting started

3. Into the cluster

### i. What is allocation?

- A deposit of **service units** (SU) that users will be charged from to run jobs on our cluster
  - 1 SU = 1 core-hour
  - Example:
    - My allocation: 50,000 SU
    - Running a job: 24 core \* 10 hours = 240 SU
    - Balance: 49,760 SU
  - Cannot run jobs after exhausted
- All LSU HPC & LONI clusters requires allocation to run jobs
- Free to users
- But not worthless!  $(1 \text{ SU} \approx \$0.1)$

### Case study

#### • User:

"Hi, my PI recently applied for an allocation on SuperMIC and was approved (see forwarded email below). However, I do not see that this allocation is available for my use in <a href="https://accounts.hpc.lsu.edu/balances.php">https://accounts.hpc.lsu.edu/balances.php</a> . When will I be able to access the allocation?"

#### > User Services:

"You should either request to join your PI's allocation through the user portal, or ask your PI to add you to the allocation"

### • Test

### **What are the <u>TWO</u> things required to run jobs on our clusters?**

- a) An active myLSU account
- b) An active LSU HPC / LONI account
- c) An active LSU HPC / LONI allocation
- d) A valid payment method (credit card / bank account / check / cash ...) to pay for the services

### ✤ What are the <u>TWO</u> things required to run jobs on our clusters?

- a) An active myLSU account
- b) An active LSU HPC / LONI account
- c) An active LSU HPC / LONI allocation
- d) A valid payment method (credit card / bank account / check / cash ...) to pay for the services

### **Break time!**

- Login to one of the user portals (LSU HPC or LONI) with your HPC username and password. Update your email and phone number (for practice).
  - LSU HPC: https://accounts.hpc.lsu.edu
  - LONI: https://allocations.loni.org
- Download MobaXterm (if you are Windows user)
- Review commands in Linux and the vim editor

	Cheat sheet of Commands in Linux		
history	Command history		
mkdir	Make a folder		
ls	List a folder -a List all files including hidden -I Shows files with a long listing format		
cd	Change directory		
pwd	Show current directory		
ср	Сору		
rm	Remove files (CAREFUL!)		
Up arrow (↑)	Move back in history		
Tab	Fill in unique file name		
Tab Tab	Press tab twice, show all available file names		

### **Break time!**

- vi (name of file)
- Commands in VI
  - i enter insert mode (-- INSERT -- shows in the bottom left corner)
  - esc exits insert mode, back to the command mode
    - dd -> deletes line
    - u -> Undo
    - Shift Z shift Z or :wq -> saves and exits VI
    - :q! -> exit without saving
    - : (some number) -> moves through file to row #
    - /(indicator) -> search
      - Use N to find Next
    - [ (page up) ] (page down)
- NO CAPS (for example :q! is not :Q!)

## File system summary

Directory (folder)	Distributed	Throughput	Lifetime	Quota	Best for
/home/[username]	$\checkmark$	Low	Unlimited	5GB (QB2) 10GB (others)	Code / executables
/work/[username]	$\checkmark$	High	60 days of inactivity	Unlimited	Job input/output
/project/[Pi's username]	$\checkmark$	Medium / High	1 year (renewable)	As PI requested (N x 100GB)	Specific project / group sharing. NOT for archive!
/var/scratch	×	High	End of job	Subject to node specs	(Most users do not need it. Only rare cases)

### • Tips

- Neither /work nor /project is for long-term storage
- /work directory will be created **1** hour after the first cluster login
- /project directory: **Only PI w/ active allocations** can apply! (See appendix or contact us)
- Never write output to your home directory!
- Check current disk quota and usage: balance / showquota

## Summary

- Two types of software packages:
  - Preinstalled (modules)
  - User installed

**1. Intro to HPC** 

2. Getting started

3. Into the cluster

4. Software

#### HPC User Environment 1

- Intro to HPC 1
  - 1) Why HPC?
  - 2) What is HPC?
  - 3) Our HPC
- 2. Getting started
  - 1) Accounts
  - 2) Allocation
- 3. Into the cluster
  - 1) Getting connected
  - 2) File system
- 4. Software environment
  - 1) Preinstalled
  - User installation 2)

- $\rightarrow$  LSU HPC (SMIC, Deep Bayou, SuperMike III) / LONI (QB2, QB3)
- $\rightarrow$  Need an account sponsor! Most likely a faculty
- $\rightarrow$  Request a new one or join an existing one
- $\rightarrow$  Logging in via SSH; Do NOT run jobs on head node
  - $\rightarrow$  Know your /home, /work, /project
  - $\rightarrow$  Use modules
  - $\rightarrow$  No sudo or yum

### Next week

#### HPC User Environment 2

- 1. Queuing system
- 2. How to run jobs

### **Contact us**

#### Contact user services

- Email Help Ticket: <u>sys-help@loni.org</u>
- Telephone Help Desk: +1 (225) 578-0900

# Appendix 1. Applying for storage allocation (/project) LSU

- Storage allocation ≠ computing allocation (what we talked about today)
- PI can apply for extra disk space on the /project volume for you and his/her entire research group if
  - your research requires some files to remain on the cluster for a fairly long period of time; **and**
  - their size exceeds the quota of the /home
- The unit is 100 GB
- Storage allocations are good for 1 year, but can be extended based on the merit of the request
- Examples of valid requests
  - I am doing a 12-month data mining project on a large data set
  - The package I am running requires 10 GB of disk space to install
- Examples of invalid requests
  - I do not have time to transfer the data from my scratch space to my local storage and I need a temporary staging area

# Appendix 2. Create your own module key

An example of a simple module file (~/my\_module/gitkey):

```
#%Module
proc ModulesHelp { } {
    puts stderr { my compiled version of git.
    }
}
module-whatis {version control using git}
set GIT_HOME /home/fchen14/packages/git-master/install
prepend-path PATH $GIT_HOME/bin
```

- Add the path to the key to the MODULEPATH environment variable:
  - \$ export MODULEPATH=~/my\_module:\$MODULEPATH
- Then try to use:
  - \$ module load gitkey
  - \$ which git
  - \$ module unload gitkey
  - \$ which git
