What is LaTeX?
Or, Why Am I Even Here?

Why LaTeX?

Preamble

We the people of the CCT and LaSigma REUs...

Packages

Line Breaks

This is text on the slide. This is the first "paragraph" of text. It doesn't care about single line breaks. . .

. . . but it will break the line if there are two . . .

. . . and only breaks once if there are more than two. Format your source however you like.

You can also add newlines with a double backslash \\or with \linebreak
like this.

If you want more space, add a \vskip to it.

Lists

- I am an item of the list.
- I am another item of the list.
- I am yet another item of the list.

1. I am the first item of the enumerate.
2. I am the second item of the enumerate.
3. I am the third item of the enumerate.

Columns

This is text in the first column. It is much longer than the second column's text. Both columns are lined up at the first line of the columns.

This is centered text in a second column.

This text comes after and outside of the columns environment entirely.

Equations

$$F = ma \tag{1}$$

Greek letters and other math symbols are really easy to insert and format:

$$\int_0^\infty \alpha + \beta = \phi \tag{2}$$

Math To Know

$$\texttt{\textbackslash sum:} \quad \sum$$
$$\texttt{\textbackslash prod:} \quad \prod$$
$$\texttt{\textbackslash int:} \quad \int$$
